Monetary crisis makes a changing effect in food consume and society nutritious, also increase bad nutritious problem cause lack of food to society. Progress effect can be a big problem increase it is generation reduction quality in the future. This case actually must afraid by government and also all of societies, cause our country determines by quality of our generation. In this case, government especially health department in Bandar-Lampung must given it duty about bad nutritious problem, wish this problem can solve effectiveness. Bad nutritious problem at children under 5 years old in Bandar Lampung not get intensive medic care, and there are several of them past away and guess that there are secret case not trace yet by health Bandar Lampung department. These problems which make researcher conduct this research, where the research was done in Bandar-Lampung on 7th May 2008 to 28th July 2008.

The objectives of the research are to give an analysis a service affectivity health department of Bandar Lampung in solve a problem about bad nutritious problem on 2006. Research design in this research are quantitative with statistic, it is how to converse social reality or social phenomenal in to numbers to makes an analysis using statistic tools. To can make a measurement so we need a long process and a technique.

The data collection in this research researcher use questioner, it is data collection with ask some questions that arranged by researcher and given by respondent. The population of the research is all of family that has bad nutritious problem at Bandar Lampung on 2006. The samples of the research are it population it self, cause the population les than 100 people. So, in this research the researcher use take population from family that has a bad nutritious problem. Technique of data analysis in this research is using an alternative answer good, not good and least. The result of the research show that service affectivity at health department of Bandar Lampung is average good, it is 72,7% with other word can said that the result was significant.
